PROJECTSERVICES

## INTRODUCTION

---

Chilli Project Services Pty Ltd is a commercial estimating and project support company, which has performed work for the Queensland Department of Main Roads, Brisbane Airport Corporation, Brisbane City Council as well as Major and Minor Contractors in Queensland and New South Wales.

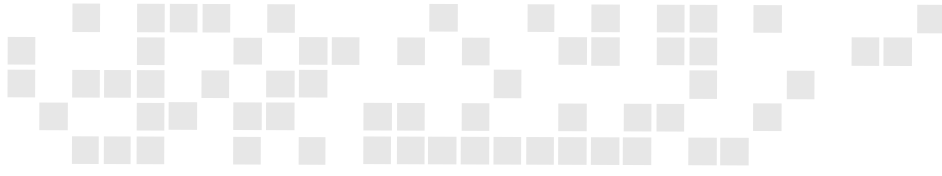

Our business model was developed primarily to provide engineering support to Construction businesses in times of peak work loads. Therefore the services offered have been tailored to meet the majority of Civil Engineering construction and estimation works that are generally required to fulfil most civil projects.

Chilli Project Services specialise in Commercial Estimating, the writing and implementation of project plans, project scheduling and other general project engineering services. We have been heavily involved in the start up phase of several recent major projects in South East Queensland.

We have also successfully acted as the Independent Estimator for the Department of Main Roads on the following projects:

1. ARRP-CQ Alliance for the Rockhampton Region
2. ARRP-SQ Alliance for a combination of several Southern Queensland Regions
3. Ingham Alliance for the Townsville Region

## WHAT WE DO

---

Chilli Project Service's core business primarily consists of commercial estimating services; however we offer a variety of additional services that essentially cover the majority of engineering requirements on any project.

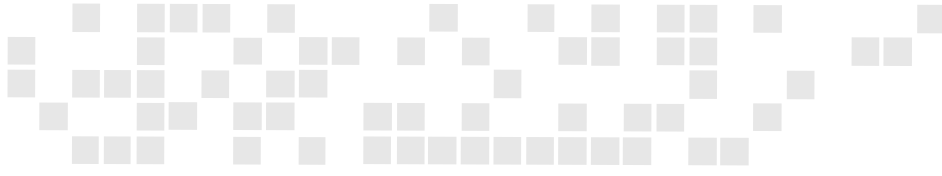

These services include:

- :: Budget Estimate Reviews
- :: Construction Scheduling in either Suretrak or Microsoft Project
- :: Constructability Reviews
- :: Project Management
- :: Project Plan and Work Method Production
- :: Risk Management

All four staff members have extensive construction experience (see attached CV's) that we believe is an essential component in offering the services that we do.

This practical experience sets Chilli Project Services apart from many similar groups. Our experience ensures current market prices are reflected in our estimates, and that appropriate and realistic productivities are used.
